Factory Mutual – 1-90 Common Systems – Steel Deck - Adhered TPO.....	71

Underwriters Laboratories (UL)

General

All regional building codes and most local building code officials require that roofing systems meet minimum performance requirements when exposed to external fire sources. The accepted method for measuring external fire resistance is ASTM E-108. This test standard, and closely related standards such as Underwriters Laboratories UL-790 and Uniform Building Code 15-2, is used to determine the ability of a roof system to hinder the horizontal spread or vertical penetration of an external fire source. In accordance with these standards, all classified roof covering assemblies fall into one of the three following categories.

The class of roof covering required by each regional building code depends upon many factors, including the use and location of the building and the type of construction. The local building authority should always be consulted as to what the roofing assembly classification will need to be for each roofing project.

It should be noted that these classifications apply to roofing assemblies, and NOT the roofing membrane. A roofing membrane that is classified as part of a Class A assembly when installed over a particular insulation may not qualify as part of a Class A assembly with another insulation.

The “UL Item Number” in the following listings has been added as a service to those who have the UL Building Materials Directory. It identifies the UL listing from which our Code Approval Guide listing derives.

Exterior Fire Ratings:

1. **CLASS A:** Includes roof coverings which are effective against severe fire exposures.
2. **CLASS B:** Includes roof coverings which are effective against moderate fire exposures.
3. **CLASS C:** Includes roof coverings which are effective against light fire exposures.

Deck Classifications:

1. **Noncombustible Roof Decks (NC):** Steel, Concrete, Poured Gypsum – require testing for horizontal spread of flame.
2. **Combustible Roof Decks (C):** Wood, Plywood, Tectum – require testing for both horizontal spread and vertical penetration of flame.

The following information has been referenced from the UL Online Certification Directory document: TGFU.GuidelInfo

- Certified gypsum wallboard, any thickness, may be included in any roofing system without adversely affecting the certification. Insulations may be attached to the deck with fasteners, hot mopping asphalt or certified adhesive.
- Certified insulated systems may be installed over existing certified insulated systems when:
 - The new system is certified for use with the existing roof insulation type (glass fiber, perlite, wood fiber, foamed plastic, etc.)
 - The total thickness of insulation in both systems does not exceed the maximum specified for the new system being applied.

Maintenance and Repair Systems

These roofing systems are composed of several types of roofing applications which are specifically limited for installation (recover) over existing roofing systems as specified. These systems may not meet certification requirements without being used over existing systems. Recovering may also be accomplished with certified new construction roofing systems where compatibility has been determined by test, by empirical data or by known performance properties of similar materials to the test methods. The following guidelines are provided to assist Authorities Having Jurisdiction in determining the suitability of a new construction roofing system as a recover system.

Noncombustible Deck Construction:

1. Insulated roof systems may be utilized over any type of existing roof system and maintain its new construction rating when the roof deck is noncombustible.
2. Insulated multiple-layered hot mopped, cold application or modified bitumen membrane new construction systems with a base ply of Type G1 or Type G2 may be used over any existing roof system and maintain its new

construction rating when the roof deck is noncombustible. The insulation may be omitted from the re-cover system.

- Uninsulated multiple-layered hot mopped, cold application or modified bitumen membrane new construction systems with a base ply of Type G1 or Type G2 may be used over any existing uninsulated roof system and maintain its new construction rating when the roof deck is noncombustible.

Combustible Deck Construction:

- Insulated roof systems certified for use over combustible deck can be used over any type of existing roof system and maintain its new construction rating.
- Insulated roof systems certified for use over noncombustible deck may be used over any type of Class A, B or C existing roof systems. The resultant Class will be the lesser rating of the existing system or the new construction (recover) system.
- Uninsulated multiple-layered hot mopped, cold application or modified bitumen membrane new construction systems with a base ply of Type G1 or Type G2 may be used over any existing uninsulated roof system and maintain its new construction rating.

General Notations

- PLEASE NOTE:** Not all UL-rated assemblies that use Amrize Building Envelope LLC (“Amrize”) are eligible for the Red Shield, Red Shield Medallion, or Platinum Warranty. The Elevate standards, guidelines, and specifications regarding roofing system components and attachment for the warranty desired must be followed.
- If a discrepancy occurs between this guide and UL Certifications, the published information located in the UL Certifications Directory at <https://productiq.ulprospector.com> should be adhered to and utilized.
- Noncombustible decks Classifications are acceptable for use over combustible (15/32” minimum plywood) decks when .5” gypsum board or .25” DensDeck® are used directly over the deck with all joints staggered 6” minimum from plywood joints.
- The below stated assemblies may not be suitable for a Red Shield Warranty. Prior to installation, contact a Elevate Representative for approval of assembly for warranty purposes.
- HAILGARD™/ISOGARD™ HG Insulation is an acceptable alternative to all insulations in the following Classifications except where DensDeck is stated.
- ISO 95+ GL™ & ISOGARD GL is trademarked.

UL Certifications (TFGU.R9516)

NOTE: The UL assemblies listed below can be found on the UL Online Certification Direct report TGFU.R9516. You can click on the report number previously listed to open a hyperlink to the report.

The following table lists Elevate Brand/Trade Name and the equivalent GenFlex Roofing Systems Brand/Trade Name and is an acceptable alternate to any applicable Classification below.

TRADE NAMES	
Elevate	GenFlex
ISO 95+ GL or ISOGARD GL	GenFlex ISO Insulation or GenFlex GL ISO Insulation
RESISTA™ or ISOGARD CG	Coated Glass Facer or GenFlex CG ISO Insulation
ISOGARD™ HD Coverboard	GenFlex HD ISO
ISOGARD HD Composite	GenFlex HD ComplISO
HailGard Composite Board or ISOGARD HG	GenFlex HailGard or GenFlexISO HG
I.S.O. Stick	GenFlex ISO Bond Insulation Adhesive
I.S.O. Twin Pack Insulation Adhesive	GenFlex One Step Insulation Adhesive
Single-Ply LVOC Bonding Adhesive	EZ UltraPly TPO Bonding Adhesive LVOC
Single-Ply LVOC Bonding Adhesive-1168	EZ TPO Bonding Adhesive LVOC-1168
QuickSeam Splice Tape	GenFlex Seam Tape
EcoWhite QuickSeam Splice Tape	GenFlex White Seam Tape
QuickSeam Batten Cover Strip	GenFlex Cover Tape
QuickPrime Plus Primer	GenPrime

Single-Ply LVOC Primer	All-Purpose LVOC Primer
UltraPly™ TPO	EZ TPO
UltraPly TPO XR 100	EZ Fleece Backed TPO (45 mil)
UltraPly TPO XR 115	EZ Fleece Backed TPO (60 mil)
UltraPly TPO XR 135	EZ Fleece Backed TPO (80 mil)
UltraPly TPO SA	EZ TPO Peel and Stick HW
UltraPly Bonding Adhesive	EZ TPO Bonding Adhesive
XR Stick Membrane Adhesive	EZ TPO FB Stick Adhesive
TPO QuickSeam Flashing	EZ Peel & Stick Flashing
UltraPly TPO QuickPrime	EZ Primer
V-Force™	Vapor Shield Membrane
V-Force SB Primer	SA-Solvent Based (SB) Primer
SA-LVOC Primer	SA-LVOC Primer
Twin Jet	GenFlex Quick Dual

Elevate TPO – General Components

Assembly Number	Deck	Roofing System	Max. Slope	Class
1	NC	<p>Insulation: Any UL Classified, any thickness, adhered with Twin Jet or Quick Dual.</p> <p>Membrane: Any UL Classified modified bitumen system, BUR system or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system suitable for use with any roof insulation</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that of the Classified Roofing System (TGFU) currently limited to noncombustible roof deck.</p>	See NOTE 1	A, B, or C See NOTE 1
2	NC	<p>Vapor Barrier (Optional): V-Force, Vapor Shield Membrane self-adhered.</p> <p>Roofing System: Any Insulated UL Classified modified bitumen system, BUR system, or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system. Insulation may be adhered with I.S.O. Twin Pack, I.S.O Twin Pack Green, I.S.O.Stick or I.S.O. Spray R or Twin Jet spray adhesive.</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that for the currently Classified insulated system, currently limited to a noncombustible roof deck.</p>	See NOTE 1	A, B, or C See NOTE 1
3	C-15/32	<p>Vapor Barrier (Optional): V-Force, Vapor Shield Membrane self-adhered.</p> <p>Insulation (Optional): ISO 95+™ GL or ISOGARD™ GL any thickness.</p> <p>Barrier Board: Minimum 1/2" thick gypsum wallboard, or minimum 1/4" thick Georgia-Pacific Gypsum LLC DensDeck® Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard™ Roof Board, joints in barrier board offset 6" with joints in deck.</p> <p>Roofing System: Any Insulated UL Classified modified bitumen system, BUR system, or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system. Insulation may be adhered to or mechanically attached with I.S.O. Twin Pack, I.S.O Twin Pack Green, I.S.O.Stick or I.S.O. Spray R or Twin Jet spray adhesive.</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that for the currently Classified insulated system, currently limited to a combustible roof deck.</p>	See NOTE 1	A, B, or C See NOTE 1

Elevate TPO – General Components - Continued

4	C-15/32	<p>Vapor Barrier (Optional): V-Force, Vapor Shield Membrane self-adhered.</p> <p>Insulation (Optional): ISO 95+ GL or ISOGARD GL any thickness.</p> <p>Insulation: 1" minimum thickness RESISTA or ISOGARD CG, joints in insulation board offset 6" with joints in deck.</p> <p>Roofing System: Any Insulated UL Classified modified bitumen system, BUR system, or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system. Insulation may be adhered to or mechanically attached with I.S.O. Twin Pack, I.S.O. Twin Pack Green, I.S.O.Stick or I.S.O. Spray R or Twin Jet spray adhesive.</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that for the currently Classified insulated system, currently limited to a combustible roof deck.</p>	See NOTE 1	A, B, or C See NOTE 1

Spray R or Twin Jet spray adhesive.</p> <p>Membrane: Any UL Classified modified bitumen system, BUR system or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system suitable for use with any roof insulation.</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that of the Classified Roofing System (TGFU) currently limited to noncombustible roof deck.</p>	See NOTE 1	A, B, or C See NOTE 1
6	C-15/32	<p>Insulation: Any UL Classified, any thickness, adhered with I.S.O. Twin Pack, ISO Twin Pack Green, I.S.O. Stick or I.S.O. Spray R or Twin Jet spray adhesive.</p> <p>Barrier Board: Minimum ½" thick gypsum wallboard, or minimum ¼" thick Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard Roof Board, joints in barrier board offset 6" with joints in deck.</p> <p>Membrane: Any UL Classified modified bitumen system, BUR system or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system suitable for use with any roof insulation.</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that of the Classified Roofing System (TGFU) currently limited to combustible roof deck.</p>	See NOTE 1	A, B, or C See NOTE 1

Elevate TPO - Ballasted

General Notes

1. Unless otherwise indicated, the insulation and membrane are laid loosely.
2. As an alternate, the insulation may be mechanically fastened to the deck with screws and metal or plastic discs, hot roofing asphalt or a combination of screws/discs and hot roofing asphalt.
3. An optional layer of gypsum board may be placed between the insulation and the roof deck on all systems.
4. As an alternate, an Elevate "Ballast Paver" system may be used in lieu of ballast and maintain the Classification of any Classified ballasted assembly.
5. As an alternate, river bottom or crushed stone conforming to ASTM D-448 No. 3 or 24 may be used in lieu of the No. 4 stone applied at 1000 lb/100 ft² (minimum).
6. As an alternate, river bottom or crushed stone conforming to ASTM D-448 No. 1 or 2 may be used in lieu of the No. 4 stone applied at 1300 lb/100 ft² (minimum).
7. Optional) Noncombustible roof deck Classifications are applicable for use over combustible (15/32" minimum plywood) roof decks when minimum ½" thick gypsum board or minimum ¼" thick Georgia-Pacific Gypsum LLC "DensDeck Roof Board" or "DensDeck Prime Roof Board" or "DensDeck DuraGuard Roof Board" are used directly over the deck with all joints staggered a minimum of 6" from plywood roof deck butt joints.
8. UltraPly TPO SA membrane is not approved for use in ballasted systems.

Elevate TPO – Ballasted – Class A

Assembly Number	Deck	Roofing System	Max. Slope
9	C-15/32	<p>Insulation: Any ISO 95+ insulation, any thickness, loose laid or mechanically fastened.</p> <p>Membrane: Fire Retardant RubberGard (EPDM), 45 or 60 mil UltraPly or UltraPly (TPO), any color, Elevate APP 160, APP 160-P, Elevate APP 170, (modified bitumen) or any UL Classified CPE, EPDM, LSPE, PVC, TRE, Nitrile alloy or modified bitumen, loose laid or mechanically fastened.</p> <p>Surfacing: River bottom stone (¾" to 1½" diameter), 1000 lb/100 ft².</p>	2
12	NC	<p>Insulation (Optional): Polystyrene (extruded or expanded) polyisocyanurate, glass fiber, perlite, wood fiber any combination and any thickness.</p> <p>Membrane: Any UL Classified EPDM or TPO membrane. EPDM splices may be primed with QuickPrime Plus, and seamed with SA-1065 Splice Adhesive, QuickSeam Splice Tape or EcoWhite QuickSeam Splice Tape. Seams may be covered with QuickSeam Flashing and or QuickSeam Batten Cover (or EcoWhite QuickSeam Flashing).</p> <p>Surfacing: River bottom stone (¾" to 1½" diameter) at 1000 lb/100 ft².</p>	2

Elevate TPO – Adhered Membrane

General Notes

1. Unless otherwise indicated, the "UltraPly TPO" membranes are fully adhered with "UltraPly Bonding Adhesive", 1 gal/45 ft² finished application rate, Single-Ply LVOC Bonding Adhesive" or "Single-Ply LVOC Bonding Adhesive- 1168. Adjacent sheets are lapped 3" to 6", laps are heat sealed. Edges of laps may be sealed with ¼" bead of "WS6-TPO-3002".
2. Noncombustible roof deck Classifications ("Fire Retardant RubberGard" systems excluded) are applicable for use over combustible (15/32" thick minimum plywood) roof decks when minimum ½" thick gypsum board or minimum ¼" thick Georgia-Pacific Gypsum LLC "DensDeck Roof Board" or "DensDeck Prime Roof Board" or "DensDeck DuraGuard Roof Board" are used directly over the roof deck with butt joints in the barrier board offset a minimum of 6" from the with the plywood butt joints in the roof deck.

Elevate TPO – Adhered Membrane – Class A

Assembly Number	Deck	Roofing System	Max. Slope
87	NC	<p>Insulation (Optional): Any UL Classified, any thickness.</p> <p>Insulation: Glass fiber, wood fiber or perlite, ½" minimum thickness.</p> <p>Membrane: UltraPly TPO.</p>	½"
88	C-15/32	<p>Insulation (Optional): Any UL Classified, any thickness.</p> <p>Barrier Board: Gypsum wallboard, ½" thick minimum or minimum ¼" thick Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard Roof Board, joints in barrier board offset 6" with joints in deck.</p> <p>Membrane: UltraPly TPO.</p>	2 ½"
123	C-15/32	<p>Slip Sheet: Two layers VersaShield Underlayment or VersaShield FB-2S, preliminary attachment.</p> <p>Insulation: Elevate ISO 95+ GL (any thickness), mechanically attached.</p> <p>Membrane: Elevate .045 or .060; UltraPly TPO (1/2 :12);</p>	½"
124	C-15/32	<p>Slip Sheet: Two layers VersaShield FB-1S, preliminary attachment.</p> <p>Insulation: Elevate ISO 95+ GL (any thickness), mechanically attached.</p> <p>Membrane: Elevate.045 or .060; RubberGard LS-FR (1/2:12); RubberGard MAX or 75 mil (1/2:12); RubberGard MAX FR (3/4:12); UltraPly TPO (1/2 :12); EPDM membranes may be coated with AcryliTop PC-100 at 1 gal/100 ft² and maintain rating.</p>	½"
125	NC	<p>Insulation: Any UL Classified, any thickness, mechanically fastened.</p> <p>Insulation: Oriented strand board, minimum 7/16" thick, mechanically fastened.</p> <p>Membrane: UltraPly TPO.</p>	1 ¼"
143	NC	<p>Insulation (Optional): ISO 95+GL or ISOGARD GL, any thickness.</p> <p>Membrane: UltraPly TPO, 45 to 80 mil adhered with UltraPly Bonding Adhesive or Single-Ply LVOC Bonding Adhesive or Single-Ply LVOC Bonding Adhesive 1168, at 45-ft2/gal.</p>	¼"

144	NC	Insulation: Lightweight Insulated concrete or structural concrete. Membrane: 45 or 60 mil UltraPly TPO fully adhered with UltraPly Bonding Adhesive at 45 ft ² /gal.	2 ½"
160	NC	Insulation (Optional): Any UL Classified polyisocyanurate, any thickness Insulation: Minimum ½" thick ISOGARD HD, minimum 1" thick ISOGARD HD Composite Board or ½" thick RESISTA or ISOGARD CG Membrane: UltraPly TPO, fully adhered with UltraPly Bonding Adhesive, Single-Ply LVOC Bonding Adhesive, Single-Ply LVOC Bonding Adhesive -1168.	¼"
163	C-15/32	Insulation (Optional): ISO 95+ GL or ISOGARD GL, any thickness Insulation: 1" minimum ISOGARD HD Composite Board or 1" thick RESISTA or ISOGARD CG offset 6" with joints in the deck. Membrane: UltraPly TPO, fully adhered with UltraPly Bonding Adhesive, Single-Ply LVOC Bonding Adhesive, Single-Ply LVOC Bonding Adhesive 1168.	¼"
166	C-15/32	Insulation (Optional): ISO-95+ GL or ISOGARD GL, any thickness. Barrier Board: Minimum ¼" thick Georgia-Pacific Gypsum LLC DensDeck® or DensDeck Prime®, DensDeck®StormX™ Prime or DensDeck DuraGuard, with all joints staggered a minimum 6" from the plywood joints. Membrane: UltraPly TPO 45 to 80 mil	2"
167	NC	Insulation (Optional): ISO 95+GL or ISOGARD GL, any thickness Barrier Board: Min. ¼" thick Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board, with all joints staggered a min. 6" from the plywood joints. Membrane: UltraPly TPO 45 to 80 mil	2"
180E	C-15/32	Insulation: Any UL Classified, any thickness. Barrier Board: Minimum ¼" Georgia-Pacific Gypsum LLC Dens Deck. Membrane: UltraPly TPO 45 to 80 mils. adhered full coverage with Jet Bond Spray Adhesive, at a rate of 800 - 1000 ft ² per canister.	½"

Elevate TPO – Adhered Membrane – Class B

Assembly Number	Deck	Roofing System	Max. Slope
22	C-15/32	Base Sheet: One or more plies MB Base. Insulation: Minimum 1" thick UL Classified wood fiber or minimum ½" thick UL Classified wood fiber over 1" thick ISO 95+GL. Membrane: UltraPly TPO.	½"
22a	NC	Insulation: Minimum 1 ½" thick ISO 95+GL or RESISTA, or ISOGARD CG or minimum 1 ½" thick UL Classified wood fiber or minimum ½" thick UL Classified wood fiber. Membrane: UltraPly TPO.	½"
37	C-15/32	Insulation (Optional): ISO 95+ GL or ISOGARD GL, any thickness Insulation: Minimum ½" thick ISOGARD HD, minimum 1" thick ISOGARD HD Composite Board or ½" thick RESISTA or ISOGARD CG with butt joints in the insulation offset a minimum of 6" from the with the plywood butt joints in the roof deck. Membrane: UltraPly TPO, adhered with UltraPly Bonding Adhesive.	¼"
40	NC	Cover Board: Minimum ½" thick ISOGARD HD or 1" thick ISOGARD HD Composite Board or ½" thick RESISTA or ISOGARD CG. Insulation: ISO-95+ GL, any thickness. Membrane: UltraPly TPO fully adhered with UltraPly Bonding Adhesive.	1"
61	C-15/32	Insulation (Optional): Any UL Classified, any thickness. Barrier Board: Minimum ¼" thick Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard Roof Board Membrane: UltraPly TPO, 45 to 80 mil adhered with UltraPly Bonding Adhesive 1 gal/45 ft ² .	4"
62	C-15/32	Insulation (Optional): Any UL Classified, any thickness. Barrier Board: Minimum ¼" thick Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard Roof Board Membrane: UltraPly TPO 45 to 80 mil adhered with Single-Ply LVOC Bonding Adhesive, 1 gal/45 ft ² .	4"

65	NC	Insulation: ISO 95 + GL, ISOGARD GL, RESISTA, ISOGARD CG, ISOGARD HD or ISOGARD HD Composite Board any thickness. Membrane: UltraPly TPO 45 to 80mils adhered full coverage with Jet Bond Spray Adhesive at a rate of 800 - 1000 ft ² per canister.	¼"
----	----	---	----

Elevate TPO – Adhered Membrane – Class C

Assembly Number	Deck	Roofing System	Max. Slope
12	C-15/32	Insulation: ISO 95+GL or ISOGARD GL, any thickness. Barrier Board: Minimum ¼" thick Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard Roof Board Membrane: UltraPly TPO fully adhered with UltraPly Bonding Adhesive, 1 gal/45 ft ²	Unlimited

Elevate TPO SA – Self Adhered Membrane – Class A

Assembly Number	Deck	Roofing System	Max. Slope
182	C-15/32	Insulation (Optional): Any UL Classified any thickness Barrier Board: Minimum ¼" Georgia-Pacific Gypsum LLC DensDeck Roof Board or DensDeck Prime Roof Board or DensDeck DuraGuard Roof Board Membrane: UltraPly TPO SA, 45 to 80 mil.	2"
183	NC	Insulation: ISO 95+GL or ISOGARD GL, any thickness. Membrane: UltraPly TPO SA, 45 to 80 mil.	¼"

Base Sheet: One ply SBS Premium Poly Base, mechanically fastened. Ply Sheet: One ply SBS Premium Poly Base, fully adhered with hot mopping asphalt. Membrane: UltraPly TPO XR 100 (45 mil), UltraPly TPO XR 115 (60 mil) or UltraPly TPO XR 135 (80 mil), fully adhered with hot mopping asphalt.	¼"

Elevate TPO – Mechanically Attached Membrane

General Notes

1. Unless otherwise specified, the "UltraPly" membrane is mechanically fastened with large head metal or plastic fasteners spaced 18" OC and maximum 2" from membrane's edge. Adjacent sheets are lapped 4", covering fasteners. Laps are heat sealed "UltraPly TPO" lap edges may be sealed with ¼" diameter bead of "UltraPly TPO General Purpose Sealant".
2. Noncombustible roof deck Classifications ("Fire Retardant RubberGard" systems excluded) are applicable for use over combustible (15/32" thick minimum plywood) roof decks when minimum ½" thick gypsum board or minimum ¼" thick Georgia-Pacific Gypsum LLC "DensDeck Roof Board" or "DensDeck Prime Roof Board" or "DensDeck DuraGuard Roof Board" are used directly over the roof deck with butt joints in the barrier board offset a minimum of 6" from the with the plywood butt joints in the roof deck.

6	C-15/32	<p>Existing Roof System: To Maintain Existing Classification, Any Class A, B or C insulated or un-insulated.</p> <p>Type G3 mineral surfaced cap sheet or APP modified bitumen membrane roofing system covered with:</p> <p>Membrane: UltraPly TPO XR 100 (45 mil), UltraPly TPO XR 115 (60 mil) or UltraPly TPO XR 135 (80 mil) mechanically attached.</p>	½"

Elevate TPO – Maintenance and Repair Systems

General Notes

Unless otherwise indicated, insulation and base sheets may be mechanically attached, hot mopped or attached with cold application adhesive as Listed under Adhesive, Roof Construction Materials, in any system incorporating modified bitumen.

Elevate TPO XR – Maintenance and Repair – Class A

Assembly Number	Deck	Roofing System	Max. Slope
1	C-15/32	<p>Existing Roof System: Class A, B or C, BUR (smooth surface or cap sheet), to retain existing Classification, covered with:</p> <p>Slip Sheet: Atlas Roofing Corp. FR 10 or FR 11, one layer.</p> <p>Membrane: UltraPly TPO, mechanically fastened.</p>	1"
2	C-15/32	<p>Existing Roof System: Any Class A, B or C Build-Up Roof System, to retain rating place.</p> <p>Slip Sheet: One-layer VersaShield Underlayment, preliminary attachment.</p> <p>Membrane: .045 or .060 mil UltraPly TPO</p>	1"
4	C-15/32	<p>Insulation: Any UL Classified, any thickness, adhered with I.S.O. Twin Pack.</p> <p>Membrane: Any UL Classified modified bitumen system, BUR system or CPE, CSM, CSPE, EPDM, NBP, PIB, PVC, TPO or TRE membrane system suitable for use with any roof insulation.</p> <p>NOTE 1: Classification (A, B or C) and maximum incline will be the same as that of the Classified Roofing System (TGFU) currently limited to noncombustible roof deck.</p>	See NOTE 1

7	C-15/32	Existing Roof System: Class A, B or C, BUR (smooth surface or cap sheet), to retain existing Classification, covered with: Slip Sheet: Atlas Roofing Corp. FR 10 or FR 11, one layer or Type G2 Base sheet laid loosely including MB Base. Membrane: UltraPly TPO, mechanically fastened.	1/2"
8	C-15/32	Existing Roof System: Class A, B or C roofing system, to retain the existing Classification, is covered with: Slip Sheet (Optional): One or more layers GAF VersaShield, Atlas Roofing Corp. FR 10 or FR 50. Insulation (Optional): ISOGARD HD, RESISTA, or ISOGARD CG, ISO 95+ GL any thickness. Membrane: RubberGard Max, Fire Retardant RubberGard, RubberGard MAX FR, RubberGard LS-FR or UltraPly TPO and UltraPly TPO XR 100, 115 or 135 membranes mechanically fastened. NOTE 1: Maximum incline not to exceed that for which the existing roofing system is currently Classified.	See NOTE 1
11	C-15/32	Existing Roof Systems: Class A, B or C, BUR (smooth surface of cap sheet) to retain existing classification covered with: Insulation: 1/2" thick ISOGARD HD or minimum 1" thick ISOGARD HD Composite Board. Membrane: UltraPly TPO	Adhered 1/4" Attached 1/2"

UL Internal Fire Ratings

The assemblies referenced below can be found on the UL Product IQ website. (<https://productiq.ulprospector.com>) To determine the resistance of a building to internal sources of fire, Underwriters Laboratories has conducted extensive testing and classification of wall, floor/ceiling, and roof/ceiling assemblies. UL classified assemblies are rated according to the time in hours the assembly will contain a fire and still maintain structural integrity. Testing is conducted in accordance with UL Standard 263 (ASTM E-119), which is recognized by all major building codes.

Roof/Ceiling Assemblies are listed in the UL Fire Resistance Directory - Vol. 1 under the prefix "P" and are classified by hourly fire rating according to the type of protection used to contain a fire:

Assembly	Protection Used
P000 – P099	Concealed Grid Suspended Ceiling
P200 – P299	Exposed Grid Suspended Ceiling
P400 – P499	Metal Lath (Plaster) Ceiling
P500 – P599	Gypsum Board Ceiling
P600 – P699	Miscellaneous Fireproofing
P700 – P799	Spray-Applied Resistive Material
P800 – P899	Spray-Applied Resistive Material
P900 – P999	Unprotected Concrete or Composite Decks

It should be noted that the roof membrane forms only a small part of the total roof/ceiling assembly. For a structure to qualify for a "P" Assembly or Roof Deck Construction, all materials used to construct the assembly (including roof decking, ceiling materials, light fixtures, duct work and structural support members) must be UL classified and installed as described in the appropriate UL Directories.

The insulations listed with each of the following "P" Assemblies are not, in most cases, the only UL accepted insulations for that assembly. Consult the UL Fire Resistance Directory - Vol. 1 for "P" Assembly information and the UL Roofing Materials and Systems Directory for Roof Deck Construction information or call Elevate Technical Services for additional accepted insulations.

UL has indicated on page 8 of the 2008 Fire Resistance Directory - Vol. 1 that "Class A, B or C roof coverings consisting of hot mopped or cold applied bituminous materials or a roof covering material classified under 'Roofing Membranes' (CHCI) may be applied directly to the concrete or wood surface of floor designs being used as roofs without a reduction of fire resistance ratings." They further state on page 8 that "Roof insulation is to be carefully controlled relative to manufacturer, type and thickness as specified. Less than the specified thickness could result in higher temperatures on the roof covering while a greater thickness of insulation could cause earlier structural failure.

Classified polystyrene insulation, with a density of 5 pcf or less, may be placed on concrete floors or structural concrete roofs without reducing the assembly rating. When polyisocyanurate insulation is used over concrete in D 900 Series Designs, the unrestrained beam rating shall be increased by a minimum of ½ hour."

Roof Deck Constructions are listed in the UL Roofing Materials and Systems Directory and are rated according to the interior flame spread of the assembly as compared to the flame spread of a typical built-up roof installed over a metal deck (UL 1256). Roof Deck Constructions may also be classified according to wind uplift performance. The fire rating of a UL Roof Deck Construction is similar to the Factory Mutual Class I internal fire (calorimeter) rating, and they are deemed equivalent by the Model Building Code Agencies.

UL Roof Deck Constructions and "P" Assemblies Deck Constructions (Tested in accordance to UL 1256)

UltraPly TPO 96/120 roofing systems are classified for use in the following Deck Construction:

1, 2, 9, 14, 120, 123, 158, 200, 219, 237, 260, 276, 289, 292, 325, 374, 411, 412, 413, 419, 421, 440, 441, 444, 457, and 458. Consult Roof Deck Constructions (TGKX) in the UL Roofing Materials and Systems Directory, a Regional Technical Coordinator, or the Elevate Codes Department for an acceptable insulation for use in these constructions.

"P" Assemblies (Designs)

UltraPly TPO roofing systems are classified for use in the following hourly roof / ceiling designs. Ballasted, adhered or mechanically attached systems with or without optional wood fiber or mineral board insulation for use in Design numbers: P215, P216, P225, P227, P230, P231, P242, P246, P251, P259, P405, P406, P407, P410, P508, P510, P511, P512, P513, P514, P519, P701, P708, P709, P710, P711, P712, P717, P718, P719, P720, P722, P723, P725, P726, P727, P728, P729, P730, P731, P732, P733, P734, P735, P737, P738, P739, P801, P810, P811, P815, P819, P822, P824, P825, P826, P827, P902, P903, P904, P905, P906, P907, P908, P909, P910, P911, P912, P913, P914, P915, P916, P917, P919, P920, P921, P922, P923, P925, P926, P927, P928, P929, P930, P931

Consult Fire Resistance Ratings (BXUV) in the UL Fire Resistance Directory, a Regional Technical Coordinator, or the Elevate Codes Department for an acceptable insulation, thickness, and additional requirements.

NOTE: The accepted insulation must be used in a UL Class A, B or C rated roofing assembly. UL acceptable system (e.g., adhering EPDM to Perlite or Fiberglass) listed for "P" design may not be approved for installation and warranty by Elevate. Contact Elevate Technical Services or a Elevate Regional Technical Coordinator concerning acceptance.

Factory Mutual General Information

Factory Mutual Class 1 Approvals cover a wide range of testing of roofing products, including tests for fire resistance, corrosion resistance, fuel contribution and hail damage, Factory Mutual Approvals are known best for the uplift resistance, 1-60, 1-90, etc. afforded by an FM Approved roofing assembly:

- FM 1-60 assemblies have been tested to withstand 60 psf air pressure applied for a period of one minute as well as one minute at the 30 and 45 psf levels.
- FM 1-90 assemblies have been tested to withstand 90 psf air pressure applied for a period of one minute as well as one minute at the 30, 45, 60 and 75 psf levels.
- Higher uplift ratings are possible based on the deck type and its attachment, fastener density and row spacing where applicable.

When Factory Mutual 1-60 or 1-90 uplift ratings are specified, additional insulation attachment and reduced perimeter and corner batten (in-seam plate or batten for Reinforced Systems) spacing will/may be required. Consult the current edition of Factory Mutual Loss Prevention Data Sheets 1-28 and 1-29 for instructions for determining the required corner and perimeter dimensions and reduced spacing and increased fastener densities.

Ground Roughness Definitions

The descriptions below are based on information in ASCE 7. While information on this subject in the body of that standard is brief, the designer must read the considerable additional information provided in the related commentary section of that document, particularly when the exposure is not obvious.

For Exposure Category B to be used:

- A. The exposing terrain should include urban and suburban areas, wooded areas, or other terrain with numerous closely spaced obstructions having the size of single-family dwellings or larger.
- B. Use of this exposure category should be limited to those areas for which the above terrain prevails in all directions for a distance of at least 2600' (800 m) or 20 times the height of the building or other structure, whichever is greater.
- C. Limited openings in this terrain, such as small parking lots, roads, road intersections, playing fields, underdeveloped lots, and tree clearings can be tolerated. For openings that exceed 600' (180 m) in total length measured radially from the building and 165' [50 m] in width, use surface roughness exposure C.
- D. For buildings, whose height is less than or equal to 30' (9.1 m), the prevailing exposure B distance may be reduced to 1500' (460 m).
- E. In cases where the difference between exposures B and C is not obvious, use exposure C.

For Exposure Category C to be used:

NOTE: In cases where the difference between exposure B and C is not obvious, use exposure C.

- A. The exposing terrain should be open with scattered obstructions having heights less than 30' (9 m), such as flat, open country and grasslands, and in all cases where exposures B and D do not apply.
- B. This also includes where surface roughness exposure B terrain is interrupted by clearings (parking lots, wide roads, road intersections, playing fields, underdeveloped lots, tree clearings, etc.) of greater than 600' (180 m) in total length measured radially from the building and exceeding 165' (50 m) in width.

For Exposure Category D to be used in determining the design wind pressure, all the following must be met:

NOTE: Some examples of D exposures include inland waterways, the Great Lakes, and coastal areas. See fig. 3.2.2.3 in FM Global LPDA 1-28 for examples of Exposure D requirements.

- A. The terrain upwind of the structure must be flat, unobstructed areas or water surfaces including smooth mud flats, salt flats, and unbroken ice and is present in the upwind direction for a distance greater than approximately 5000' (1500 m) or 20 times the building height, and
- B. The building must be within the greater of 600' (180 m) or 20 times the building or structure height from the terrain (see Fig. 3.2.2.3), even if the terrain between the building and the terrain described in A. above would otherwise be considered Category B or C.

Ballasted Systems

The following information has been extracted from FM Global Property Loss Prevention Data Sheet 1-29. FM Approvals does not approve ballasted systems. If a ballasted system is to be used, select components that are FM Approved for use together as shown in a specific RoofNav assembly. In lieu of fasteners or adhesives used to secure above-deck components, use ballast in accordance with information found in LPDS 1-29, Section 2.2.10.17 to provide wind resistance.

It is not possible to evaluate the uplift resistance of ballasted systems in the same manner as adhered coverings. The criterion for failure for the latter systems is separation of the covering from the insulation, or the insulation from the deck. Ballasted systems fail these criteria by definition.

Uplift forces are not uniform over the entire roof. Properly designed ballasted systems take advantage of the average uplift force in a given roof area. The membrane distributes the uplift force, allowing the ballast to be effectively used. Extreme winds, however, may cause gravel scour, paver dislodgement, and ballooning of the covering. A parapet at least 3 feet (0.9 m) will help to reduce ballast scour.

General Notations

PLEASE NOTE: Not all FM-rated assemblies that use Elevate roofing products are eligible for the Red Shield, Red Shield Warranty. The Elevate standards, guidelines, and specifications regarding roofing system components and attachment for the warranty desired must be followed.

RoofNav® assemblies are summarized in the following tables; however, an assembly search should be conducted to confirm the attachment rates and requirements set for in the approval number. On all occasions, should a discrepancy occur between this guide and RoofNav, the published information located in the approval at www.roofnav.com should be adhered and utilized.

Additionally, please be aware that the following assemblies typically are in reference to the field of the roof rating and attachment. Please refer to FM Global Loss Prevention Data Sheet 1-28 and 1-29 to determine the requirements for additional fastening requirements in the perimeter and corner.

In all cases, when the project is Factory Mutual insured, please consult the FM agent assigned to review the project to ensure compliance.

The assemblies listed in this document may not be suitable for a Red Shield Warranty. Prior to installation, contact a Elevate Technical Representative for approval of assembly for warranty purposes.

It is acceptable to use multiple layers of FM Approved insulation, mechanically secured through all layers, provided all the following are true:

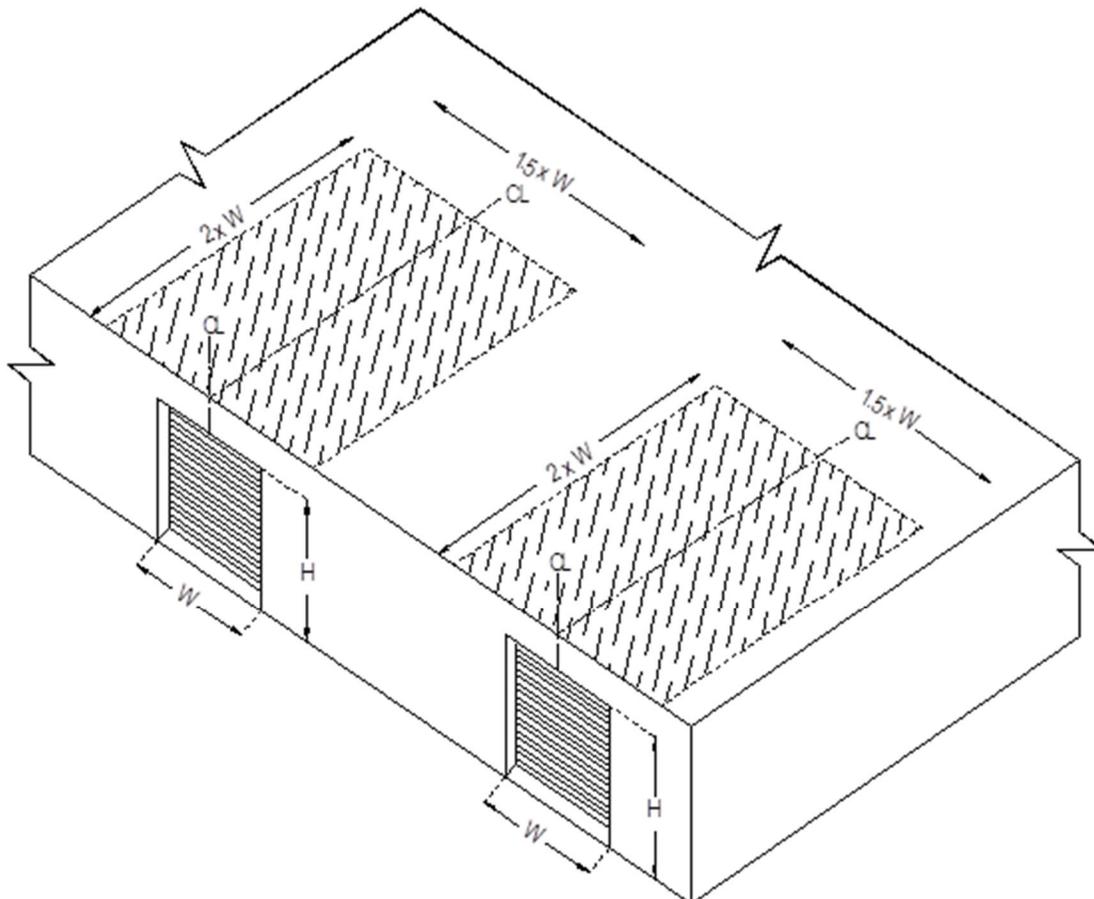

- All layers are the same insulation.
- The total insulation thickness is not greater than the maximum FM Approved thickness of the insulation.
- The mechanical fastening and wind uplift rating are per the FM Approval of the top layer.
- The roof cover/insulation/fastener combination is FM Approved.

Large Wall Opening Enhancement

ASCE 7 should be consulted to determine the appropriate building configuration, enclosed, partially enclosed, or open. The building configuration impacts the appropriate design and attachment required for the roofing system. If an existing building is altered, adding large openings, change of use, etc., adjustments may need to be made to accommodate the changes.

The large wall opening enhancement is required when the sum of the various opening areas ($w \times h$) is greater than 10% of the wall area.

Perimeter $\frac{1}{2}$ sheets are required in the hatched area as shown in the diagram below. It is common installation practice to extend the perimeter along this entire building plan dimension to accommodate this rule, but it is not required. For warranty purposes Elevate finds it acceptable to utilize battens, plates, and fasteners or InvisiWeld attachment methods for this enhancement. (See diagram below.)

Factory Mutual (FM) Hail Ratings

Use FM RoofNav to find properly rated roof assemblies. The following information has been referenced from the FM Global Property Loss Prevention Data Sheet (LPDS) 1-34. FM recommends using different hail rated assemblies determined by the project's location. Reference the map provided (Fig. C-1) to determine which rating may be required for your FM insured project. Install the FM Approved roof according to the RoofNav listing and the manufacturer's instructions. Perimeter flashing while not carrying a hail rating should be installed in accordance with LPDS 1-49, Perimeter Flashing. It is the responsibility of the building owner to validate the project meets the local building code requirements.

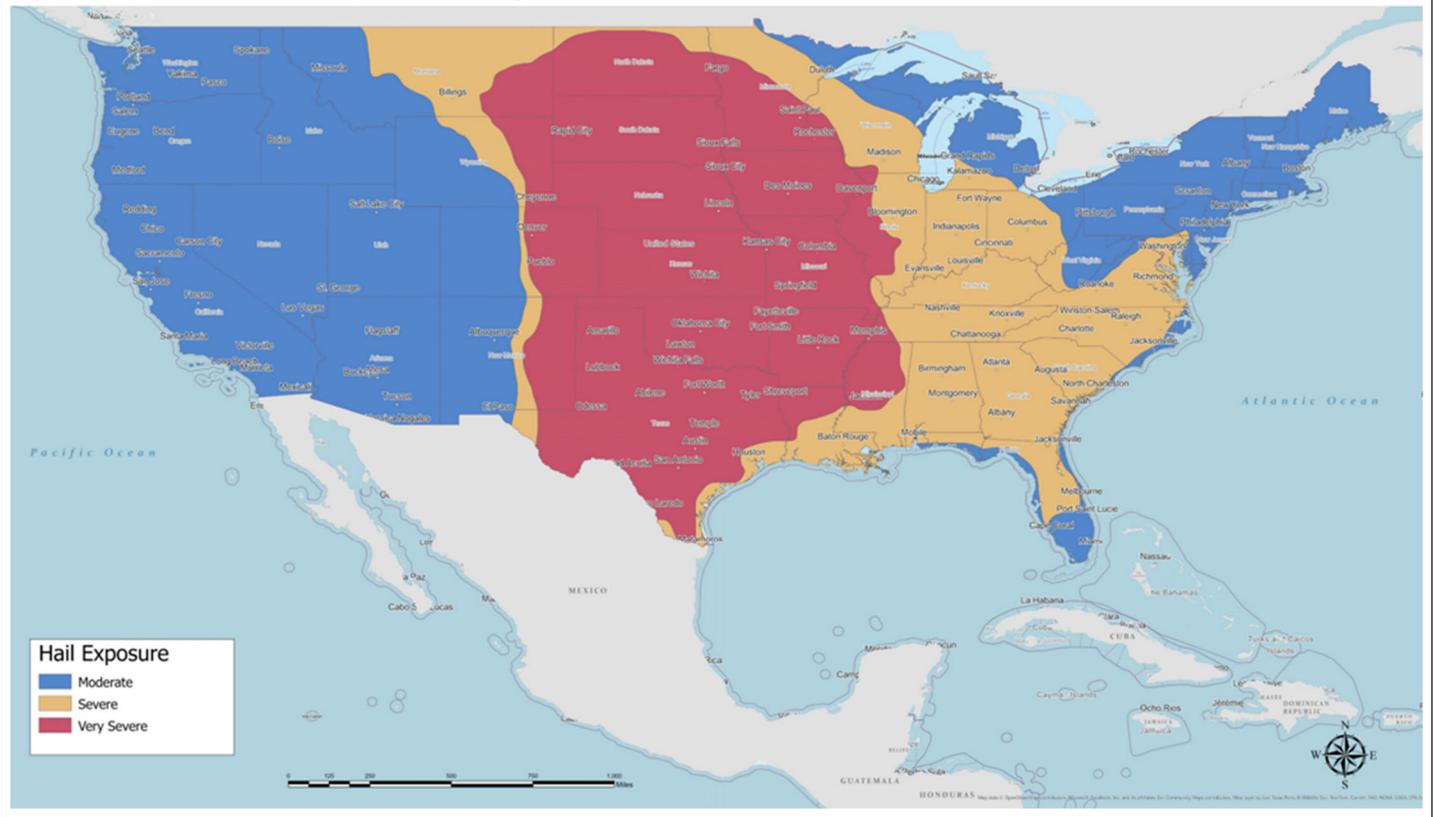

FM Hail Ratings

Hail Hazard Area	Roof Assembly Type	FM Approval Rating
Very Severe Hail (VSH)	Poured concrete or concrete paver covered roof ^{1,2}	N/A
	Any FM Approved Roof	VSH
Severe Hail (SH)	Any FM Approved Roof	VSH, SH, FM Class 3, or FM Class 4
	Poured concrete, concrete paver or aggregate (stone) covered roof ^{1,2}	N/A
Moderate Hail (MH)	Any FM Approved Roof	VSH, SH, FM Class 3, or FM Class 4
	Poured concrete, concrete paver or aggregate (stone) covered roof ^{1,2}	

NOTE:

- Follow Data Sheet 1-29, Roof Deck Securement and Above-Deck Roof Components, for use and restrictions on concrete pavers and aggregate (stone).
- Concrete pavers meeting ASTM C1491-18, Standard Specification for Concrete Roof Pavers, or equivalent standard outside the US.

Fig. C-1 – Hailstorm Hazard Map for the Contiguous United States

FM – Very Severe Hail

The VHS Listings – Fully Adhered TPO with Adhered DensDeck StormX Prime Cover Board table has been provided at the end of this document. This table lists options that qualify for Very Severe Hail (VSH) ratings from FM Approvals. This table does not represent the full spectrum of assemblies available and FM Approvals and RoofNav.com should be consulted for a full list of qualifying assemblies.

Factory Mutual (FM) – Roof Zone Definition

The following diagrams are referenced from the FM Global Property Lost Prevention Data Sheets 1-28 and 1-29.

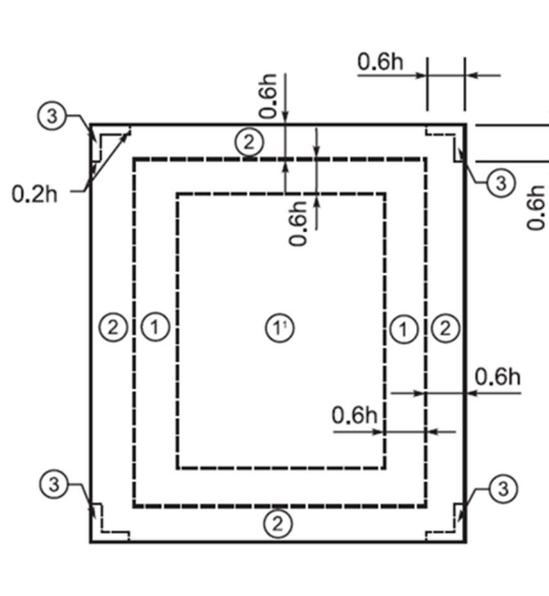

This outlines how to determine the minimum required roof zone areas based on the building size and relative conditions.

ROOF ZONE LAYOUT BASED ON BUILDING HEIGHT

NOTE:

If a parapet with a minimum height of 3 ft (0.9 m) is provided around the entire perimeter, Zone 2 values may be used in Zone 3.

For low-slope roofs $\leq 7^\circ$ (1.5 in./ft. slope) and $h \leq 60$ ft (18 m), or $h < 90$ ft (27 m) and $h/w \leq 1.0$, the roof can be divided into four zones as a function of h , where h = the mean roof height.

Zone 3 (Corner):

The roof corners, with L-shaped dimension = $0.6h$ by $0.6h$ by $0.2h$.

Zone 2 (Perimeter):

The roof perimeter, inward from the roof edge, with rectangular dimension and width = $0.6h$ from roof edges.

Zone 1 (Field):

The field-of-roof (area inside corners and perimeter corners) up to a distance of $1.2h$ from the roof perimeter.

Zone 1' (Field Prime):

Applies to relatively wide buildings ($> 2.4h$) and covers the remaining roof area inward from Zone 1.

Example: Roof height of 30'

$.6 \times 30' = 18'$

$.2 \times 30' = 6'$

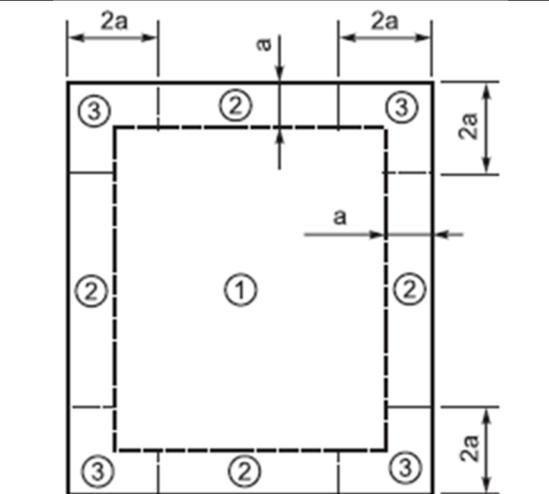

Zone 3(Corner): 0.6×30 by 0.6×30 by $0.2 \times 30 = 18'$ by $18'$ by $6'$

Zone 2 (Perimeter): $0.6 \times 30 = 18'$

Zone 1 (Field): $0.6 \times 30 = 18'$

Zone 1' (Field Prime): Covers the remaining roof area inward from Zone 1.

Roof Slopes $\leq 7^\circ$ (1.5 in./ft slope) and $h > 60$ ft (18 m) for $h/w > 1.0$; or $h \geq 90$ ft (27.4 m) for $h/w \leq 1.0$, the roof can be divided into three zones as a function of a , where $a = 10\%$ of the lesser plan dimension, but not less than 3 ft (0.9 m).

Zone 3(Corner):

The roof corners, with L-shaped dimension = $2a$ by $2a$ by a .

Zone 2 (Perimeter):

The roof perimeter zone width dimension = a width in from roof edges.

Zone 1 (Field):

The field-of-roof (area inside corners and perimeter areas) is the remainder of the roof area.

Example: Roof size and height of 55' x 55' x 65'

$10\% \text{ of } 55' = 5.5'$

$a = 5.5'$

Zone 3(Corner): $2 \times 5.5'$ by $2 \times 5.5'$ by $5.5'$ = $11'$ by $11'$ by $5.5'$

Zone 2 (Perimeter): $5.5'$

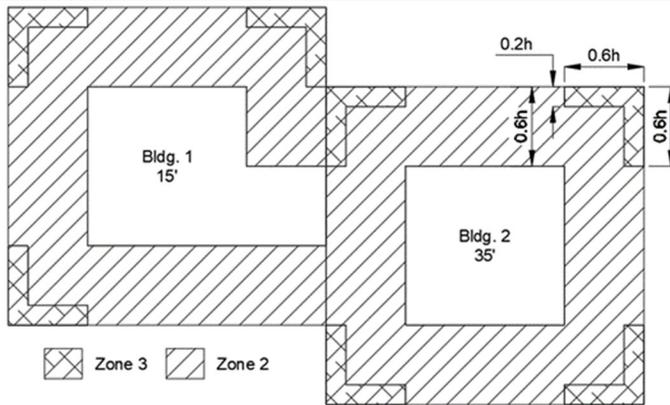

Zone 1 (Field): Remainder of roof area

Roof Slopes $> 7^\circ$ ($> 1.5''$)

For roof slopes $> 7^\circ$ ($> 1.5''$), depending on the slope. The width (a) of the various perimeter and corner zones for these steeper sloped roofs equals the lesser of 10% of the building width or $0.4h$, but not less than 4% of the width or 3 ft (0.9 m). See FM Global Property Loss Prevention Data Sheet 1-28 for your specific conditions.

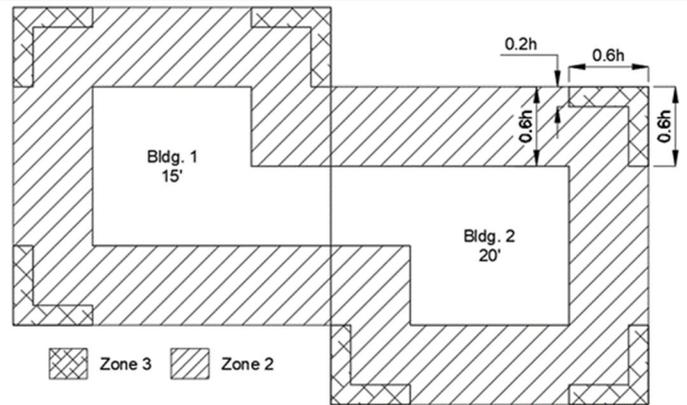

ROOF ELEVATION CHANGES

Elevation Change of ≥ 10 ft

Where the difference in roof elevations between abutting buildings or building sections is greater than or equal to 10 ft (3.0 m), treat abutting areas of the higher building as perimeter and corner areas in accordance with figure shown above.

Elevation Change of < 10 ft

Where the difference in roof elevations between abutting buildings is less than 10 ft (3.0 m), follow guidance in figure shown above. The perimeter and field zones continue from one roof to the other. The buildings must be abutting for this to apply.

NOTE: The buildings do not abut if there is any horizontal separation.

Factory Mutual (FM) – Prescriptive Enhancement Options – Perimeter and Corner

ADHERED MEMBRANE – INSULATION ENHANCEMENTS (CHOOSE ONE):

Option 1:	Use a system that is rated adequate for Zone 3 in all areas of the roof.
Option 2:	Prescriptive enhancements for Zones 2 and 3
Limitations:	<ul style="list-style-type: none"> Zone 1 rating in any location does not exceed Class 1-90 Building is in non-tropical cyclone-prone region and Zone 1 rating does not exceed Class 1-105

For either of the above conditions, increase the securement over the Zone 1 rating as follows:

Mechanically Securement of Insulation Enhancement

ASSEMBLIES USING INSULATION FASTENERS, ENHANCE AS FOLLOWS:

Zone 2:	Increase number of fasteners per board by 50% minimum, but at least one fastener per 2 ft ²
Zone 3:	Install one fastener per 1 ft ²

NOTE: Round up to the next whole fasteners if necessary

Adhesive Securement of Insulation Enhancement

COMPONENTS ADHERED WITH ADHESIVES APPLIED IN RIBBONS, SPOTS, ETC.:

Zone 2:	Install rows not more than 67% of the Zone 1 spacing between rows, or area
Zone 3:	Install rows not more than 50% of the Zone 1 spacing between rows, or area

NOTE: Round the bead spacing down to the next whole number. 8.71 in o.c. beads spacing would be rounded down to 8 in o.c.

Mechanically Attached Membrane Securement Enhancement

MECHANICALLY ATTACHED MEMBRANE – MEMBRANE SECUREMENT ENHANCEMENTS – IN SEAM	
Prescriptively enhance by reducing the distance between rows of roof cover fasteners and stress plates or batten bars from the Zone 1 spacing using the following:	
Zone 2:	Ensure distance between rows is not more than 67% of the FM approved spacing used for Zone 1
Zone 3:	Ensure distance between rows is not more than 50% of the FM approved spacing used for Zone 1
NOTE: For metal decks install all rows of roof cover fasteners perpendicular to the ribs of the roof deck to better distribute the wind load and prevent deck failure.	
Example: A 75 psf rated assembly using a 10' sheet size for Zone 1 (Field), decrease the row spacing for Zone 2 (Perimeter) by no more than 67% and Zone 3 (Corner) by no more than 50% of the field sheet span. (Always round down.) Zone 1 (Field): 10' Sheets at 114" o.c. rows of fasteners Zone 2 (Perimeter): 114" rows x .67 = 76.38" rows = Max 76" o.c. rows Zone 3 (Corner): 114" rows x .5 = 57.5" rows = Max 57" o.c. rows	

InvisiWeld Securement Enhancement

INVISIWELD ATTACHED MEMBRANE – MEMBRANE SECUREMENT ENHANCEMENTS	
Prescriptively enhance by reducing the distance between rows of roof cover fasteners and stress plates from the Zone 1 spacing using the following:	
Zone 2:	Decrease spacing between fastener points in one or both directions. Ensure the total tributary area to each fastener is not more than 67% of the FM approved spacing used for Zone 1
Zone 3:	Decrease spacing between fastener points in one or both directions. Ensure the total tributary area to each fastener is not more than 50% of the FM approved spacing used for Zone 1
NOTE: Pre-securement of the insulation may be required. See tested assembly for validation. When rows of fasteners are used Install all rows of roof cover fasteners perpendicular to the ribs of the roof deck to better distribute the wind load and prevent deck failure.	
Example: Zone 1: 24" x 24" pattern (6 fasteners per board or a tributary area of 4 sq. ft. per fastener) Zone 2: 16" x 24" pattern (12 fasteners per board or a tributary area of 2.68 sq. ft. per fastener) Due to rib spacing you may need: 12" x 24" pattern (14 per board or tributary area of 2.28 sq. ft. per fastener) Zone 3: 12" x 24" pattern (tributary area of 2 sq. ft. per fastener)	

Base Sheet Attachment Over FM Approved Deck Types

The table below outlines the options for prescriptive enhancement options for base sheet attachment over FM approved deck types. For non-FM approved deck types, like wood, see FM Global Property Loss Prevention Data Sheet 1-29, Section 2.2.10.14.4.

BASE SHEET – MECHANICALLY ATTACHED (CHOOSE ONE):	
Option 1:	Use assembly that is rated to meet/exceed Zone 3 across the whole roof.
Option 2:	Use assembly that is rated to meet/exceed each zone.
Option 3:	Reduce the spacing between rows of fasteners by using one intermediate row in Zone 2 and Zone 3.
Option 4:	Reduce the area per fasteners to no more than 67% of the FM approved spacing in Zone 2, and not more than 50% of the FM approved spacing in zone 3.
NOTE: <ul style="list-style-type: none"> Install fasteners that engage lightweight insulating concrete (LWIC) no closer than 4" (100 mm) on center to avoid cracking the LWIC. When ribbed deck, such as steel deck is used, the fastener spacing within fastener rows must be in even multiples of the deck rib spacing (6" [150 mm] for 1½" [38 mm] deep deck) to ensure the fastener engages the top deck flange. To adequately distribute the wind load to the roof deck and its securement and prevent deck buckling and deck securement failure, install fastener rows perpendicular to the deck ribs. 	

Mechanically Attached Membrane – Preliminary Insulation Securement

The table below provides the minimum preliminary insulation fastening rate required for systems using a mechanically attached membrane. Note the rates may differ based on the use or a vapor retarder, different building enclosure classification and building Zone 1 (Field) pressure rating.

PRELIMINARY INSULATION SECUREMENT FOR FASTENED IN THE SEAM MFSP'S				
Vapor Retarder	Building Enclosure Classification	Maximum Required Zone 1 Pressure Rating (P), psf (kPa)	Fastener Requirements for Insulation or Cover Boards up to 4 x 4 ft (1.2 x 1.2 m) board	Fastener Requirements for Insulation or Cover Boards up to 4 x 8 ft (1.2 x 2.4 m) board
No	Enclosed or Partially Enclosed	No Limit	Minimum 2 per board	Minimum 4 per board
Yes	Enclosed	P = 60 (2.9)	Minimum 2 per board	Minimum 4 per board
Yes	Partially Enclosed	P = 60 (2.9)	Minimum 4 per board	Minimum 5 per board
Yes	Enclosed or Partially Enclosed	60 < P ≤ 90 (2.9 < P ≤ 4.3)	Minimum 4 per board	Minimum 5 per board
Yes	Enclosed	90 < P ≤ 300 (4.3 < P ≤ 14.4)	Minimum 4 per board	Minimum 8 per board
Yes	Partially Enclosed	90 < P ≤ 300 (4.3 < P ≤ 14.4)	Minimum 6 per board	Minimum 12 per board
Yes	Enclosed	P > 300 (14.4)	Minimum 6 per board	Minimum 12 per board
Yes	Partially Enclosed	P > 300 (14.4)	Minimum 8 per board	Minimum 16 per board

NOTE: Table 6 does not apply to roof assemblies with air barriers. Where air barriers are used, more stringent guidelines may be required in RoofNav and those must be followed.

ASCE 7 – Basic Wind Speeds for Risk/Occupancy Category

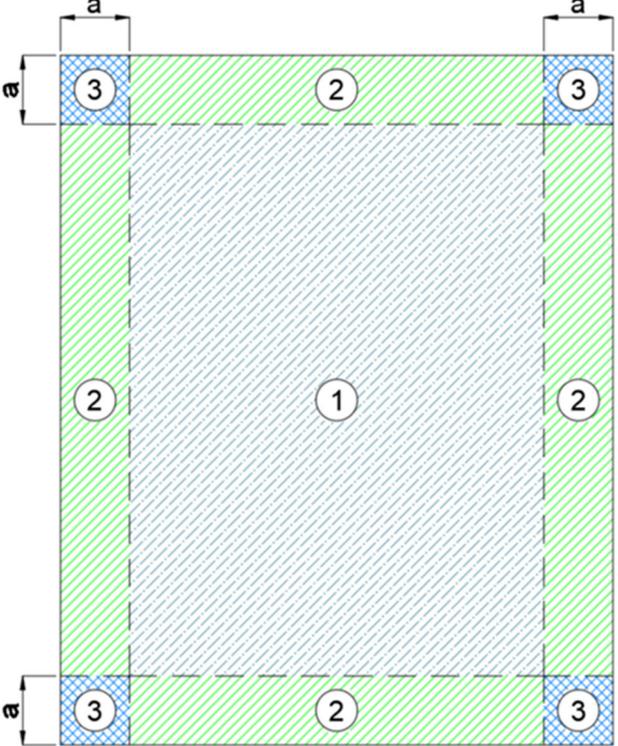

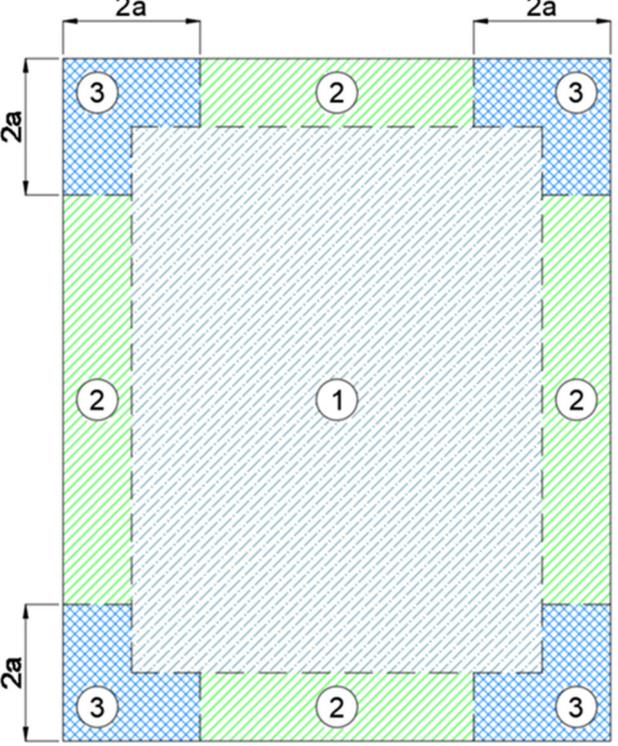

The American Society of Civil Engineers (ASCE) provides basic wind speed maps based on Occupancy/Risk Category of buildings. Refer to the appropriate version of the ASCE for wind maps specific to the building's occupancy category. These maps can be found in the specific editions of the ASCE and can be found at www.atcouncil.org/windspeed. Locations that fall within a special wind region should be reviewed by an engineer to validate the full scope of the project's requirements.

ASCE - American Society of Civil Engineers - Roof Zones – ASCE 7-10 (IBC 2015/2012)

ASCE 7-10 offers basic wind speed maps for occupancy categories I, II, III and IV. In this edition of the ASCE Occupancy Category III and IV are combined on the same map, while categories I and II have their own maps. In this edition three maps are provided based on Occupancy/Risk Category. This version of the ASCE uses a more generalized approach to the areas of the county where most of the county falls within one wind speed and the coastal areas are more defined with contour lines and varying wind speeds.

ASCE 7-10 Perimeter and Corner Definition - Examples

The diagram below is an example only. Each building type and shape may require its own specific layout for perimeters and corners. ASCE 7-10 should be consulted for nonstandard building/roof types and shapes.

Roof Heights Where $h \leq 60$ ft.	Roof Heights Where $h > 60$ ft.
	
<p>Notation: a = 10 percent of least horizontal dimension or $0.4h$, whichever is smaller, but not less than either 4% of least horizontal dimension or 3 ft (0.9 m). h = Eave height shall be used for $\theta \leq 10^\circ$. θ = Angle of plane of roof from horizontal, in degrees.</p>	<p>Notation: a = 10 percent of least horizontal dimension, but not less than 3 ft (0.9 m). h = Eave height shall be used for $\theta \leq 10^\circ$. θ = Angle of plane of roof from horizontal, in degrees.</p>

ASCE 7-16 (IBC 2018)

ASCE 7-16 offers basic wind speed maps for occupancy categories I, II, III and IV. In this edition of the ASCE all Occupancy/Risk Categories have been defined on their own maps. In this edition four maps are provided based on Occupancy/Risk Category. This version of the ASCE uses more detailed contour lines throughout the map showing more accurate wind speed estimates.

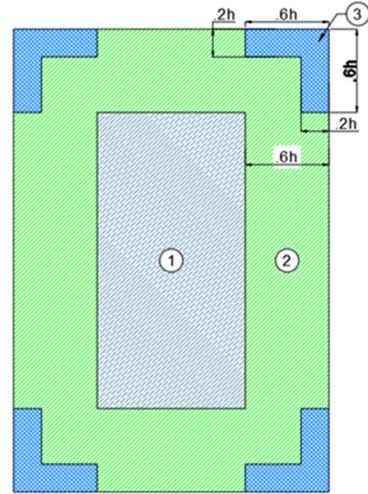

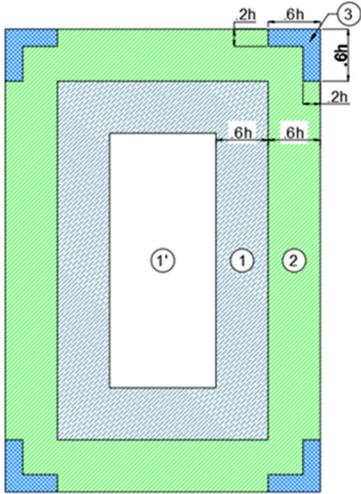

ASCE 7-16 Perimeter and Corner Definition – Examples

Data referenced from ASCE/SEI 7-16 Minimum Design Loads and Associated Criteria for Buildings and Other Structures. All referenced information should be validated against the current document and local relevant building codes. Roof zones may change based on actual building size/layout and roof type. See ASCE documents to validate zones based on building conditions.

Roof Heights Where $h \leq 60$ ft.	Roof Heights Where $h > 60$ ft.
<p>Roof Zone Layout Example for Building Height $\leq 60'$ (Roof Slope $\leq 1.5^\circ$ (7°)) h = Roof Height</p>	<p>Roof Zone Layout Example for Building Heights $> 60'$ (Roof Slope $\leq 1.5^\circ$ (7°)) a = 10% of least horizontal dimension, but not less than 3' (0.9 m).</p>
<p>Example: Building Height = 30' .6h = 18' .2h = 6' Zone 3: 18' x 18' x 6'; Zone 2: 18'; Zone 1: 18'; Zone 1: Remainder</p>	<p>Example: Building Dimensions: 80' x 200' Least Horizontal Dimension: 80' $a = 8'$ $2a = 16'$ Zone 3: 16' x 16' x 8'; Zone 2: 8'; Zone 1: Remainder</p>

ASCE 7-16 - Potential Zone Layouts Based on Building Ratio Scenario

The figures below have been referenced from the ASCE 7-16 standard. (Figure C30-1)

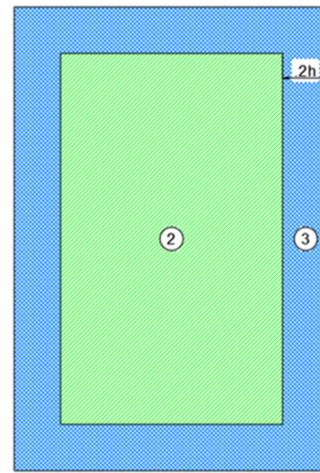

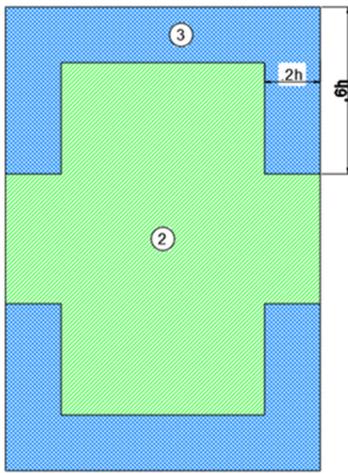

Buildings with least horizontal dimension greater than 2.4h.

Example: 60' x 1,000' x 30' = .2h: 6' & .6h: 18'
Zone 3: 18' x 18' x 6'
Zone 2: 8' wide from roof edge
Zone 1: 8' wide in from Zone 2
Zone 1: Remainder

Buildings with least horizontal dimension greater than 1.2h but less than 2.4h.

Example: 50' x 100' x 30' = .2h: 6' & .6h: 18'
Zone 3: 18' x 18' x 6'
Zone 2: 18' wide from roof edge
Zone 1: Remainder

Buildings with least horizontal dimension less than 1.2h and largest horizontal dimension greater than 1.2h.

Example: 30' x 50' x 30' = .2h: 6' & .6h: 18'
Zone 3: 6' wide from roof edge, 18' legs
Zone 2: Remainder

Building with largest horizontal dimension less than 1.2h.

Example: 20' x 20' x 20' = .2h: 4'
Zone 3: 4' wide from roof edge
Zone 2: Remainder

When the greatest horizontal dimension is less than 0.4h, the whole roof area is considered Zone 3.

1-90 IF: 1 EF: A Slope: ¾"	Treated Wood (Re-cover)	ISO 95+ GL ½"-1" thick	None	6 AP fasteners and InvisiWeld Plates per 4'x8' board	.045 mil. min. UltraPly TPO	250823-0-0
1-90 IF: 1 EF: A Slope: 1"	Treated Wood	ISO 95+ GL ½" min. thick	½" ISOGARD HD or Structodek HD Fiberboard	6 AP fasteners and InvisiWeld Plates per 4'x8' board	.045 mil. min. UltraPly TPO	251855-0-0

Factory Mutual Ballast Guidelines

Stone Ballast

ASTM D448 Standard Size No. 3 for Coarse Aggregate (nominal 1-2" [25 to 50 mm] diameter). This standard permits amounts (by weight percent) to pass through the square sieve openings as shown in the Gradation for No. 3 Stone table below.

GRADATION FOR NO. 3 STONE							
Size Number	Nominal Size Inches (mm)	Sieve Opening Inches (mm)					
		2 ½ (63)	2 (50)	1 ½ (38)	1 (25)	¾ (19)	½ (13)
3	1 to 2 (25 – 50)	100	90 to 100	35 to 70	0 to 15	--	0 to 5

Aggregate Surfacing for BUR

ASTM D1863 Mineral Aggregate Used on Built-Up Roofs gives gradation and moisture content for aggregate surfacing as noted in the Gradation for Gravel for BUR's table below.

Gradation for Gravel for BUR's			
Sieve	Amounts Finer than Sieve Specified (Mass %)		
	Size 6	Size 67	Size 7
25 mm	100	100	---
19 mm	90 to 100	90 to 100	100
12.5 mm	20 to 55	---	90 to 100
9.5 mm	0 to 15	20 to 55	40 to 70
4.75 mm	0 to 5	0 to 10	0 to 15
2.36 mm	---	0 to 5	0 to 5

NOTE: The moisture content limit for stone is ≤ 2 percent and ≤ 5 percent for slag. The dust content limit for stone and slag is ≤ 2 percent.

Factory Mutual – Very Severe Hail – DensDeck StormX Prime

See Table Below for VHS Listings – Fully Adhered TPO with Adhered DensDeck StormX Prime Cover Board table has been provided at the end of this document. This table lists options that qualify for Very Severe Hail (VSH) ratings from FM Approvals. This table does not represent the full spectrum of assemblies available and FM Approvals and RoofNav.com should be consulted for a full list of qualifying assemblies.

Refer to RoofNav assembly for complete information/requirements
It is the responsibility of the designer/user to validate assemblies in the chart for accuracy and warrantyability.
DD = DensDeck, DDP = DensDeck Prime, Securock GF = Securock Gypsum Fiber
Must use primer when adhering V-Force to substrate board.
Verify insulation thickness requirements if ISOGARD GL or ISOGARD CG are used in the assembly.

FM Prescriptive Enhancements for assemblies with Field uplift of X or less: Hurricane Region with 90 psf or less or a Non-Hurricane Region with 105 psf or Less
1. Use assembly to meet each zone uplift requirement
2. Use assembly to meet max roof uplift across the entire roof
3. Perimeter = Minimum 1.5 times the field rate of attachment but not less than 16/board (Contributory Area: 2 or less)
Corner = Minimum 32 per board (Contributory Area: 1)

FM Prescriptive Enhancements - Adhesive
Perimeter = Install rows not more than 67% of the Field spacing
Corner = Install rows not more than 50% of the Field spacing

Refer to RoofNav assembly for complete information/requirements

It is the responsibility of the designer/user to validate assemblies in the chart for accuracy and warrantability.

DD = DensDeck, DDP = DensDeck Prime, Securock GF = Securock Gypsum Fiber

Must use primer when adhering V-Force to substrate board.

Verify insulation thickness requirements if ISOAGARD GL or ISOAGARD CG are used in the assembly.

FM Prescriptive Enhancements for assemblies with Field uplift of X or less:

Hurricane Region with 90 psf or less or a Non-Hurricane Region with 105 psf or Less

1. Use assembly to meet each zone uplift requirement
2. Use assembly to meet max roof uplift across the entire roof
3. Perimeter = Minimum 1.5 times the field rate of attachment but not less than 16/board (Contributory Area: 2 or less)
Corner = Minimum 32 per board (Contributory Area: 1)

FM Prescriptive Enhancements - Adhesive

Perimeter = Install rows not more than 67% of the Field spacing

Corner = Install rows not more than 50% of the Field spacing

FM 1-90 | Fully Adhered TPO XR with Adhered Cover Board
Adhered TPO Systems Over 22 Gauge, 33 ksi Steel Deck

Updated 11/30/2020

Refer to RoofNav assembly for complete information/requirements
It is the responsibility of the designer/user to validate assemblies in the chart for accuracy and warrantability.
DD = DensDeck, DDP = DensDeck Prime, Sec = Securock Gypsum Fiber
Must use primer when adhering V-Force to substrate board.
Verify insulation thickness requirements if ISOAGARD GL or ISOGARD CG are used in the assembly.

FM Prescriptive Enhancements for assemblies with Field uplift of X or less:
Hurricane Region with 90 psf or less or a Non-Hurricane Region with 105 psf or Less
1. Use assembly to meet each zone uplift requirement
2. Use assembly to meet max roof uplift across the entire roof
3. Perimeter = Minimum 1.5 times the field rate of attachment but not less than 16/board (Contributory Area: 2 or less)
Corner = Minimum 32 per board (Contributory Area: 1)

FM Prescriptive Enhancements - Adhesive
Perimeter = Install rows not more than 67% of the Field spacing
Corner = Install rows not more than 50% of the Field spacing
